DETAILED ACTION

1. Applicant's arguments with respect to claims 1, 9, and 14-15 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 9, and 14-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Dortu et al. (U.S. Patent No. 6,100,733).

In reference to claim 1, Dortu discloses in Figure 2, a device comprising a delay lock loop circuit (2, 4, 12) responsive to an input signal (CLK) to delay the input signal by a first period and to generate an analog control signal (18) having an amplitude (this is seen to be an inherent part of any signal); and a delay circuit (5) coupled to the delay lock loop circuit (2, 4, 12) and responsive to the input signal (CLK), the delay circuit (5) being responsive to the analog control signal from the delay lock loop circuit (2, 4, 12) to delay the input signal (CLK) by a second period as a function of the analog control signal amplitude, the input signal (CLK) comprising a first clock signal (CLK1) and a

second clock signal (CLK2); and a circuit (10, 8) coupled to the delay lock loop circuit (2, 4, 12) and the delay circuit (5), the circuit being operable to receive (a) a data signal (9), (b) a first delayed clock signal (CLK1') from the delay lock loop circuit (2, 4, 12), and (c) a second delayed clock signal (CLK2') from the delay circuit (5) to process the data signal (9). The same applies to claims 9, 14, and 15 (wherein the delay lock loop circuit is configured with at least one delay cell (12, or any delay cell that is a part of delay line 4).

Allowable Subject Matter

4. Claims 2-8, 10-13, and 16-20 are allowed.
5. The following is an examiner's statement of reasons for allowance: Claims 2-8 and 10-13 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 3 wherein the input signal (13, 14) comprises complimentary clock signals in combination with the rest of the limitations of the base claim and any intervening claims. Claims 16-20 are allowed because the closest prior art of record fails to disclose a circuit as shown in Figure 2 further comprising a latch circuit (20) that is responsive to one of an output from the delay circuit (17) and an output from the delay lock loop circuit (15) in combination with the rest of the limitations of the base claims and any intervening claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
